DETAILED ACTION

Specification

1. The specification is objected to because there is a lack of section headings:

CROSS-REFERENCE TO RELATED APPLICATIONS; BACKGROUND OF THE INVENTION; and BRIEF SUMMARY OF THE INVENTION. Correction is required

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 11-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. "claim 1" in claims 11 and 15-19 and "claim 2" in claim 13 unclear because "claim1" and "claim2" were cancelled in the preliminary amendment.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1725

- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 6. Claims 10-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dumazeau in view of Brandy.

Dumazeau (col. 1, lines 6+) substantially teaches the claimed refractory casting element for continuous casting a liquid metal by using the casting element (pouring shroud) for pouring molten metal flowing from the ladle toward the distributor and the method of coating the casting element comprising a base body made of a refractory material such as graphitized alumina coated by gas impermeable coating layer having thickness between 1 and 2 mm and comprising ceramic refractory such as alumina and silica.

Dumazeau fails to teach the use of insulating hollow microspheres of alumina and silica. However, Brandy (col. 2, lines 2+) teaches the use of insulating coating material including 5-40 wt % insulating hollow microsheres of silica and alumina for the purpose of reducing weight and improving thermal insulation. Further, the coating comprising 20-80 wt % of a ceramic matix comprising vitreous grains, notably atomized silica for the purpose of preventing the coated pouring shroud or nozzle from the attack of inclusions such as oxides. It would have been obvious to one having ordinary skill in the art to provide Dumazeau the use of coating material

Application/Control Number: 10/509,501

Art Unit: 1725

including insulating hollow microspheres of alumina and silica as taught by Brandy in order to effectively pure cast alloy reduce weight, preventing inclusion attack and improve thermal insulation.

Regarding claim 16, Dumazeau in view of Brandy fails to teach the use of interpenetration between the coating layer and the refractory material of the base body.

However, the use of penetration would have been obvious to one having ordinary skill in the art in order to improve the adhesion or bonding interlocking between the coating layer and the refractory material of the base body.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ing-Hour Lin whose telephone number is (571) 272-1180. The examiner can normally be reached on M-F (9:00-5:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on (571) 272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
